                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to the isolation of novel human uterine motility-association polypeptides, and cDNA (AAS28936-AAS28994) and genomic sequences encoding for these polypeptides. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with uterine motility such as pregnancy and labour, and menstrual disorders. The polynucleotide sequences of the invention are also useful in gene therapy. AAU18094-AAU818152 represent novel human uterine motility-associated prognosis of disorders. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel nucleic acids and polypeptides useful fidiagnosing, treating, preventing and/or prognosing disorders related to these polypeptides. The polynucleotides are especially useful in the diagnosis, prognosis, prevention and/or treatment of diseases which include kidney disorders (e.g. renal failure or nephritis), cardiovascular disorders (e.g. hypertension or myocardial infarction), blood disorders (e.g. anaemia or blood coagulation disorders),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            electrolyte imbalance disorders (e.g. hyponatraemia or hyperkalaemia), neoplastic disorders (e.g. nephtoma or renal cell cancer), autoimmune diseases, cancers, inflammatory diseases, reproductive system disorders, endocrine disorders, neural activity and neurological disorders, wound healing and respiratory disorders. ```

```
The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or constitution.

A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. anches presence, for example, by enzyme linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the printed as pecification, but was obtained in electronic format directly from WIPO at the property of the printed at the property of the

         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     seq length: 0 seq length: 2000000000

Biottin--protein ligase (EC 6.3.4.-) (Biottin apo-protein ligase)
[Includes: Biotin--(methylmalonyl-CoA-carboxyltransferase] ligase
(EC 6.3.4.9); Biotin--(propionyl-CoA-carboxylase (ATP-hydrolyzing]]
ligase (EC 6.3.4.10) (Holocarboxylase synthetase) (HCS);
Biottin--(methylcrotonoyl-CoA-carboxylase) ligase (EC 6.3.4.11);
Biottin--[acetyl-CoA-carboxylase] ligase (EC 6.3.4.11);

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The sequence A is an octapeptide motif from the prion protein (PrP). The ligands are identified by binding assays with the peptide (A) or peptides containing (A). The ligands are used for detecting prion proteins (or prions) in biological or environmental samples, e.g. for diagnosis, also for removing them from samples, for treating or retarding development of prion-associated diseases, specially (Treutzfeldt-Jakob diseases (in latrogenic, new variant, familial or sporadic forms), but also cerstmann-Straussler-Scheinker disease, familial insomnia,
              Isolated polynucleotide encoding bone marrow derived polypeptides useful for treating, e.g., Parkinson's, Alzheimer's, cancer, arth Crohn's disease, and inflammatory bowel disease
                                                                                                                                                                                                       07-MAR-2000; 2000US-0519705

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to novel human bone marrow polynucleotides and polypeptides. The polypeptides of the invention may exhibit various activities e.g. cytokine and cell proliferation/differentiation, considered the constant of the invention and immune stimulation/consuperssion. The polynucleotides are polypeptides of the invention may be used to detect bone marrow cells, for treating, e.g., Parkinson's confections such as HIV, malaria and fungal infections, cancer, autoimmune disorders, arthritis, Crohn's disease, inflammatory bowel disease, and considered as arthritis, crohn's disease, inflammatory bowel disease, and considered as a markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers and as probes to hybridise and discover novel, related DNA consumences. The polypucture may be used in assays to determine biological activity, to raise antibodies or illicit an immune response and as a creagent in assays. The present sequence is a human bone marrow derived
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
